The Abassi Hi Power Sound System was designed by Neil Perch (Zion Train/Universal Egg). It was custom built to Neil's specifications by Jah Tubby (London) and Fred Davis (Wales). Neil plays the sound system dub style (mix cd available). Since its inauguration in December 2001 – Abassi has played out to great responses at many parties.

The sound system is available with Neil as selector with various vocalists or alternatively as a PA system for hire. This rig is by far and away the heaviest 12kw in Europe.
